Evaluation Guide:

• Describe the concept of you work (what is it about?)

The 1960 poster Me, Myself and I

• Review the ideas development and production process; what inspired your ideas

I looked up the PowerPoint looking at the 1960 poster. I come with the idea to present my own 1960 poster with my interests and colours represent my emotions. For example, I have chosen yellow as the main feature, it represent joy. The colour pink, the borders represent love.

• Explain the design; analyse the use of texture, shape, pattern, colour; filters,

The colour I used is bright because it's a type for 1960. The pattern use is transform to make the text wavy and bigger.

• Explain the tools, effects and methods used in Photoshop and explain the effects achieved

The tool I use is colour adjustment to fill the solid colour on my poster. The apply effects to separate with red, green and blue which give a comical outcome on the image. The first tool is paintbrush to draw the lines for the text. This was used at the beginning before adding the text and image.

• List the problems experienced and solutions applied

The problem is to apply comical effects to my photograph. The problem is I haven't set the colour correctly.

• Review feedback received from other students and tutors. Examine their comments and provide list of actions taken to improve the quality of the project

What you like about it	Even better if
The poster looks fantastic and great use of colours, and the picture itself blend well with colours in the background.	Writing should be bit big and fill in the spaces.
Your poster looks really good, good use of different colours. The words relate to the image you have chosen	Nothing needs to be improved. Look good

- Compare your poster with similar design, and comment on qualities

Compared to my poster, I looked and follow the tutorial. However, I need to add more something that relates to my poster like text or symbols. Also, I need a change bit of tonal colour linked to 1960.
